

NOVA

Recessed hands free audio and video receiver

Bpt's exclusive recessed, hands free, colour video receiver. Thanks to its small dimensions, Nova can be inserted in the standardised 3 or 6-module embedding boxes and can be framed with a choice of standard cover plates. Being compatible with all other system elements, it enables mixed installations to be created with audio-only handsets and hands free receivers or twin-channel receivers. The Nova installation in table-top version is now possible with the NST/61 support use.
